#### Definition:

Includes all costs of transportation of persons (including family travel expenses under 5 U.S.C. 5724 and 5724A as implemented by Federal Travel Regulations, Chapter 2, and DOE 1500, Chapter VI (Formerly Appendix 1501)), subsistence of travelers, and incidental travel expenses in accordance with Federal Travel Regulations, which are chargeable directly to DOE. Specifically includes (a) commercial transportation charges, rental or charter from commercial sources of passenger-carrying motor vehicles (even though they may be used incidentally for transportation of things), trains, buses, vessels, and airplanes, for transportation of persons, and expenses incident to the operation of such rented or chartered conveyances; and (b) mileage allowances for use of privately-owned vehicles and related charges that are specifically authorized (such as ferry fares and tolls), and streetcar and taxi fares (including tips) whether in connection with local travel or travel away from a designated post of duty. Excludes (a) rental of passenger-carrying motor vehicles from Government motor pools, (b) cost of contractual services contracted directly by DOE for transportation of DOE employees in and around the official station of such employees, and (c) charges for the use of vehicles of DOE contractors. All costs incurred for foreign travel between permanent duty station and foreign destination and return are charged as foreign travel. However, when temporary duty is performed at a U.S. stopover en route to or from a foreign destination, the pertinent one-way costs of the trip between the permanent duty station and the stopover are charged to domestic travel. Such temporary duty at a U.S. stopover must be shown on the travel authorization (DOE Form HQ F 1510.2A) under Remarks (Col. 14) as necessary and not just incidental to the foreign trip.

Includes costs to support the two Tennessee Agreement-In-Principle grants. The first grant supports the Tennessee Department of Environment and Conservation's independent environmental oversight and monitoring of DOE activities taking place both on-site and off-site at the Oak Ridge Reservation. The second grant provides for coordination with the Tennessee Emergency Management Agency in emergency response planning initiatives, including cooperative planning, conducting joint training exercises and developing public information regarding preparedness activities. This project also supports the Federal Facility Agreement regulatory grant with the Tennessee Department of Environment and conservation, which provides for the administrative support necessary to oversee the requirements of the interagency agreement under Comprehensive Environmental Response, Compensation and Liability Act. **Definition:**

Includes costs to support the Agreement-in-Principle grant to the Commonwealth of Kentucky to provide independent oversight of the environmental programs at the Paducah Gaseous Diffusion Plant. Kentucky uses the grant money to provide independent surface water, groundwater, air and other environmental monitoring at Paducah. These funds are not used by the State to provide regulatory oversight. The funds from the decontamination and decommissioning account are for activities directly related to the cleanup of the gaseous diffusion plants. Other activities not directly related to decommissioning of the gaseous diffusion plants are covered in the Non-Defense account. Support for these activities from the Uranium Enrichment Decontamination and Decommissioning Fund will continue until final decontamination and decommissioning and remediation of the plant is complete.

#### **Definition:**

Includes costs for the management of low-level waste, low-level mixed waste, transuranic waste, hazardous waste, and solid waste streams. This includes interim waste storage, shipment of waste to federal and commercial disposal facilities, and, in some cases, minor treatments. With the exception of transuranic waste, all legacy nuclear materials and chemical and radioactive waste streams have been dispositioned. The site operates six facilities and a rail staging area to manage waste streams which are dispositioned when generated. Transuranic waste is currently being shipped to the Savannah River Site pursuant to an agreement between the Department of Energy and the State of South Carolina. Three of ten scheduled shipments have been completed and all legacy transuranic waste is scheduled to be dispositioned by the end of FY 2003.

EY.06.45.11.0

#### Definition:

No Yes RF-0011 NM Stabilization and Disposition

Includes costs for placing plutonium metals and oxides and other highly radioactive materials in containers and packages that reduce the radioactive risk to the public, the environment, and the co-located worker. It includes activities necessary for stabilizing and repackaging over 103,901 kilograms of plutonium bearing residues located in Buildings 707 and 371, stabilizing and packaging 9.8 metric tonnes of plutonium metals and oxides for long-term storage, and packaging 6.7 metric tonnes of uranium for disposition. Completion of these stabilization and packaging activities will allow the site to deactivate, decontaminate, and decommission the facilities where the materials are currently located, and reduce the safeguards and security activities necessary to properly protect these materials.

#### Definition:

No Yes RF-0013 Solid Waste Stabilization and Disposition

Includes costs to safely and efficiently stabilize all waste generated during demolition of site buildings or through the remediation of under building soils and to dispose of the material in an approved and licensed off-site facility. Waste types include, transuranic and transuranic mixed waste with an estimated life-cycle total of 12,355 m3, low-level and low-level mixed waste with an estimated life-cycle total of 210,798 m3, and sanitary (landfill) waste with an estimated life-cycle total of 16,300 shipments, as well as hazardous and medical waste. This PBS scope also includes costs for activities for the operation, maintenance, safety controls, compliance, and stabilization/hazard reduction of facilities utilized for storage, characterization, preparation, and shipment of waste. The facilities include pads, tents, and eight buildings. Also included is site-wide support of procurement systems and standards and traffic and transportation services.

Includes costs for the treatment, storage, and/or disposal of all legacy waste generated before FY 1999 at the Los Alamos National Laboratory. The waste was generated at 33 technical areas and is treated, stored, and disposed in compliance with applicable federal and state requirements. The Los Alamos National Laboratory is committed to complete waste disposition by FY 2010 consistent with the Performance Management Plan. The accelerated cleanup efforts will support acceleration of the schedule by 20 years. The cornerstone to the planned completion is Revision 19a to the Nuclear Regulatory Commission Safety Analysis Report for the TRUPACT-II (transuranic waste shipping container) transportation requirements. Revision 19a enables the Los Alamos National Laboratory to ship 2,000 above ground high activity drums to the Waste Isolation Pilot Plant without repackaging due to wattage limits. Another Nuclear Regulatory Commission exemption similar to Revision 19a will be required to ship below ground high wattage transuranic waste without repackaging.

#### Definition:

Includes costs to store special nuclear material at several storage locations. To strengthen safeguards and security and decrease the national security risk associated with special nuclear material, this PBS will consolidate approximately 2,771 kgs (total uranium) of special nuclear material stored at the Idaho National Engineering and Environmental Laboratory as of the beginning of FY 2003 at off-site location(s) with controlled storage. Such consolidation will not only provide better security for these materials, but will also reduce the annual maintenance and security costs by eliminating unnecessary special nuclear material storage locations.

EY.12.17.12.0 No Yes ID-0012B-D SNF Stabilization and Disposition 2012

#### Definition:

Includes costs for currently storing approximately 235 metric tonnes heavy metal (legacy and non-legacy) spent nuclear fuel in four locations. Of this, approximately 26 metric tonnes heavy metal (legacy and non-legacy) spent nuclear fuel is stored in water-filled pools. In accordance with the Performance Management Plan, this project accelerates the consolidation of legacy spent nuclear fuel to a single site area at the Idaho Nuclear Technology and Engineering Center by the end of FY 2005. The project also accelerates the transfer of legacy spent nuclear fuel from wet to dry storage located at the Idaho Nuclear Technology and Engineering Center by the end of FY 2012, 11 years ahead of the previous baseline date of 2023, thereby reducing the environmental risks and the costs of interim storage. Additionally, this project will disposition the Fermi blanket legacy spent nuclear fuel, which is a sodium-bonded fuel for which a treatment and disposal has not been finalized. This activity also includes costs to manage the National Spent Nuclear Fuel Program that is responsible for working with the Office of Civilian Radioactive Waste Management to ensure future inclusion of the complex-wide DOE-owned spent nuclear fuel in the monitored geologic repository and meet the repository packaging requirements.

Includes costs to accelerate the disposition of stored transuranic waste (approximately 65,000 m3), low-level waste, Resource Conservation and Recovery Act hazardous waste, and mixed low-level waste backlog; closes on-site low-level waste disposal facilities at the Radioactive Waste Management Complex; and accelerates the consolidation of waste management facilities in order to reduce fixed operating costs. The various wastes that are covered in this project were generated during active operations at the Idaho National Engineering and Environmental Laboratory and other DOE sites. Solid low-level waste, which has no backlog, will continue to be disposed of on-site at the Radioactive Waste Management Complex, and sent off-site to other DOE disposal facilities. Backlog liquid low-level waste will continue to be sent off-site to commercial treatment, using a contract currently in place to manage this waste stream. The mixed low-level waste backlog of 2,250 m3 will be treated and disposed of by the end of FY 2004, primarily using commercial off-site treatment and disposal facilities. This allows the closure of all unnecessary storage and treatment facilities at the Waste Operations Complex by the end of FY 2004.

#### Definition:

Includes cost for accelerated remediation of soil and groundwater contaminated by past operations and closure of legacy tank systems to remove or control unacceptable risk to the sole source Snake River Plain Aquifer serving Eastern Idaho. This includes completion of all current remedial actions required by the signed Comprehensive Environmental Response, Compensation, and Liability Act agreements and operation of the Idaho National Laboratory Comprehensive Environmental Response, Compensation, and Liability Act Disposal Facility. The scope also includes Voluntary Consent Order actions to characterize and close all known legacy tanks at the Idaho National Engineering and Environmental Laboratory. Activities will complete record of decision-required remediation at three Idaho National Engineering and Environmental Laboratory facility areas/Waste Area Groups and complete all Voluntary Consent Order work. Further, the project will make significant progress towards remediation of contaminated soil from past nuclear programs, maintain all necessary Institutional Controls (remedy continuation) and complete the buried transuranic waste retrieval demonstration activities that supports the Radioactive Waste Management Complex remediation Record of Decision. Completion of a Comprehensive Environmental Response, Compensation, and Liability Act disposal facility and subsequent disposal of contaminated soils from the Idaho National Engineering and Environmental Laboratory areas will result in all but two facility areas/Waste Area Groups being available for new, unrestricted use by 2012. This scope also includes all monitoring to protect the Snake River Plain Aquifer and the nation's largest sagebrush steppe ecosystem. All project activities align with DOE's initiative to accelerate risk reduction, footprint reduction and site cleanup.

This project, in combination with PBS OR-0040, Nuclear Facility D&D-East Tennessee Technology Park (D&D Fund), will complete the East Tennessee Technology Park cleanup by 2008 and will allow the closure of this major DOE site. The main activities will include decommissioning of the centrifuge development facilities at the site and the Toxic Substances Control Act Incinerator. The centrifuge facilities subproject includes 32 facilities covering 234,000 square feet. The Toxic Substance Control Act Incinerator facilities include 39 facilities and 59,000 square feet. This scope also includes removal of centrifuge equipment that is stored inside the K-25 building and funds a portion of the site infrastructure services.

This cleanup will be completed in accordance with the interim Record of Decision. The Project will remediate the sources of radiological and chemical contamination that threaten the air, groundwater, or the Columbia River. The work includes digging up contaminated soil, constructing interim safe storage (cocooning) for the reactors, demolishing facilities in the old reactor complexes and facilities in the 300 Area, and construction of surface barriers/caps, when needed, over contaminated sites.

<b>Definition:</b>	Includes costs to accomplish operations of F- and H-Area facilities to complete stabilization/disposition of EM legacy nuclear materials and then either deactivate the facilities as part of the transition to long-term surveillance and maintenance or transfer ownership to other DOE program offices. The Savannah River Site will transition F-Area processing facilities to a safe suspension state and deactivate them by FY 2007, an acceleration of 6 years from the previous plan to accomplish this by 2012. Other DOE program offices are funding some activities that will occur concurrently with EM mission work associated with FB-Line (i.e., National Nuclear Security Administration highly enriched uranium blend down). Following completion of EM work in FY 2008, the H-Area facilities may be transferred to another program office having a continuing mission.

**Definition:**

This PBS supports all activities related to disposal of transuranic waste at the Waste Isolation Pilot Plant. Defense-generated transuranic waste is currently stored at 27 sites across the country. The transuranic waste from all of the generator sites must ultimately come to the Waste Isolation Pilot Plant for receipt, handling and disposal. The Carlsbad Field Office has the responsibility for management of the National Transuranic Waste Program, whose mission is the implementation and management of a national system that safely and cost-effectively provides for the disposal of this waste. Key elements of this system are: 1) operation of the Waste Isolation Pilot Plant facility--including mining, waste handling, and the infrastructure to safely maintain the disposal facility and operations in compliance with all federal and state laws, regulations, and environmental requirements; 2) Environmental Compliance--maintenance of compliance certification through monitoring and verifying the performance of the system's sensitive parameters, and pursuit of regulatory changes to reduce requirements that are redundant or unnecessary; and 3) National Transuranic Program Management--integration and infrastructure activities required to certify the transuranic waste and coordinate all activities across the transuranic waste complex for shipments of waste to the Waste Isolation Pilot Plant.

ID-0012C SNF Stabilization and Disposition - 2035

Includes costs to monitor, store, package, and loadout for repository disposal of spent nuclear fuel (SNF) through 2035. The Idaho National Laboratory currently stores approximately 235 metric tonnes heavy metal (legacy and nonlegacy) spent nuclear fuel in four locations. Of this, approximately 26 metric tonnes heavy metal (legacy and non-legacy) spent nuclear fuel is stored in water-filled pools. The project also accelerates the disposition of INL-managed spent fuel to the repository beginning in FY 2011 and concluding in FY 2030. The spent fuel comes from locations such as domestic research reactor SNF and SNF from the Fort St. Vrain reactor in Colorado. This SNF is presently located in various foreign countries, at multiple universities and other government installations within the United States, and at DOE sites including Savannah River Site and the Idaho National Laboratory (INL). The domestic research reactor receipts are expected to continue through FY 2027.

ID-0014C Radioactive Liquid Tank Waste Stabilization and Disposition - 2035

Includes costs for the continued efforts initiated in ID-0014B that proceed after 2012 and are complete by 2035. The high-level waste resulting from reprocessing of spent nuclear fuel resides at the Idaho Nuclear Technology and Engineering Center (INTEC) as calcine, a dry granular solid, and is safely stored in dry bin sets. Major activities include the final design of high-level waste calcine retrieval and treatment facilities, facility permitting and construction, and operations to ultimately dispose of 4,400 m3 of high-level waste calcine at the Monitored Geologic Repository (MGR). Facility efforts will provide continued operation and maintenance of all utilities and facilities required for mission support, and the inactivation of mission completed facilities. This activity also includes implementation of the permanent remedy for the tank farm soils under CERCLA. The project objective is to disposition all of the inventory of high-level waste to an off-site disposal facility (MGR), provide the final remedy for the Tank Farm soils, and stabilize the remaining facilities awaiting turnover to D&D.

#### Definition:

Includes costs for soil and water remediation work at the Idaho National Laboratory (INL), an 890 square mile government-owned site with nine major facility areas. As a result of Nuclear Energy-related reactor and nuclear material processing operations over the last several decades, chemically hazardous and radiological contaminants were released to the environment in all of these areas and to the groundwater. The INL was placed on the National Priorities List and is committed to achieving cleanup under a CERCLA agreement with the state of Idaho and Environmental Protection Agency. The Environmental Management (EM) program is responsible for addressing the cleanup of chemical and radioactive contamination to soil and groundwater at INL. Most soil contamination is confined to the nine facility areas while groundwater contamination is being addressed to prevent off-site releases from ever exceeding drinking water standards. The CERCLA agreement divides the site into 10 Waste Area Groups (WAGs), one for each facility area and one for the groundwater and area outside facility area fences. This project accelerates remediation of contaminated soil and groundwater and closure of legacy tank systems at the INL to eliminate risk to the sole source Snake River Plain Aquifer.

Includes costs is to complete remaining high risk reduction activities by 2008 as committed to in the Oak Ridge Performance Management Plan. These projects include remediation of the source of the most significant groundwater contaminant plume at Oak Ridge National Laboratory (i.e., the Core Hole 8 plume), excavation of highly contaminated sediments from surface impoundments located adjacent to White Oak Creek, and decontamination and decommissioning of high-priority facilities to ensure worker safety and mitigate the potential for contaminant release. In addition, the Molten Salt Reactor Experiment facility will undergo removal of the fuel and flush salts, which is an important and challenging activity required for eventual demolition of the facility. Cleanup of all remaining contaminated areas at the Oak Ridge National Laboratory will be completed by 2015, including the decontamination and decommissioning of remaining inactive facilities, capping of buried waste areas, bioremediation of groundwater contamination, and soil/sediment removal. Costs are also included for surveillance and maintenance activities to maintain contaminated sites and facilities in a safe and compliant state prior to cleanup to ensure protectiveness following cleanup, and to perform monitoring to assess the effective cleanup actions at the Oak Ridge National Laboratory.

<b>Definition:</b>	Includes costs to operate K-Area Material Storage and the 235-F facility as storage and surveillance facilities for stabilized materials. It also provides a stabilization and packaging capability (FY 2004 project) in the 235-F facility. The receipt, storage, and disposition of materials at the Savannah River Site allows for the deinventory and shutdown of other DOE complex sites providing substantial complex risk reduction and significant mortgage reduction savings to the Department. These facilities will be operated in compliance with applicable laws, regulations, and DOE Orders such that safety risks are less than the Department's safety goals and worker health and safety is protected. Special nuclear materials will be protected from theft and sabotage and protective capabilities upgraded as appropriate. The special nuclear materials will be managed until final disposition facilities are available.

#### Definition:

Includes costs to cover the storage, treatment and disposal functions for transuranic, low-level, mixed low-level, hazardous, and sanitary waste, as well as Pollution Prevention, Waste Minimization, Waste Certification and other waste management support functions. In addition, this project covers surveillance and maintenance activities for the Consolidated Incinerator Facility project, and general "landlord" functions, which are necessary for the general operation of the site, and care of the site's shared infrastructure components and centralized support activities. Procurement and installation of capital equipment / general plant projects, which support landlord facilities and operations, are also covered by this project.

No Yes SR-0014C Radioactive Liquid Tank Waste Stabilization and Disposition - 2035

#### Definition:

Includes costs to safely and efficiently treat, stabilize, and dispose of approximately 37 million gallons of legacy highly radioactive waste, stored in 49 underground storage tanks (approximately 33.1 million gallons of radioactive salt waste and 3.9 million gallons of radioactive sludge waste). In addition, the Savannah River Site will reduce the volume of high-level waste by evaporation to ensure that storage tank space is available to receive additional legacy waste volume from on-going nuclear material stabilization and waste processing activities; pretreat the high-level waste by segregating the waste into sludge, low curie salt, low curie salt with higher actinide content, and high curie salt with higher actinide content allowing less costly treatment methods to be used on the waste containing lower curie levels (radioactivity) and shorter lived radionuclides; vitrify sludge and high curie/high actinide high-level waste into canisters and then store and ship the canisters to the Federal Repository for final disposal; treat and dispose the low-level waste fraction resulting from high-level waste pretreatment as Saltstone grout and treat and discharge decontaminated low level liquid wastes; empty and permanently close in place using grout all high-level waste tanks and support systems; and ensure that risks to the environment and human health and safety from high-level waste operations are eliminated or reduced to acceptable levels.

#### Definition:

Includes costs to remediate contaminated waste sites and groundwater, thereby reducing risk to the site worker, the public, and the environment by 2026. For the 515 waste sites at the Savannah River Site, 281 were completed through FY 2002. For the balance to go, particular attention is paid to waste sites with mobile contaminants that are or have the potential to migrate off Savannah River Site. Remediation is planned on a prioritized risk-based approach, conducted using fundamental project management principles, implemented to be consistent with future land use and to support new missions. The aggregate of the individual projects within each of five (5) Savannah River Site watersheds and the Savannah River floodplain comprises areas of the site that can be turned over for reuse continued surveillance and monitoring.

EY.35.48.40.0

No Yes SR-0040 Nuclear Facility D&D

#### Definition:

Includes costs to accelerate completion of the Site's Environmental Management missions and transform the Savannah River Site fully to a site focused on National Security. The overall goal is to decommission those facilities that do not support the enduring National Security mission. The Savannah River Site Performance Management Plan outlines specific actions that DOE is taking to accelerate cleanup from 2070 to 2025. Also included in the Performance Management Plan is an initiative (DD-1) that accelerates the demolition of virtually all currently inactive facilities outside the site's central core area by 2006 and reducing life-cycle cost by \$945 million. This entails the removal of up to 72 facilities, with a footprint of over 600,000 square feet, located in the T, D, and M areas, which are inactive with no defined or anticipated future mission.

Yes No Defense Site Acceleration Completion - Technology Development and Deployment

#### Definition:

Environmental Management technology development investments are focused on high-priority needs through two primary thrusts. Thrust 1 will support site closure through technical support and quick-response, highly focused science and technology projects. The goal is to ensure that accelerated site closure schedules are achieved. Thrust 2 will develop and provide the scientific and technical rationale to support development of alternative approaches and step improvements to current high-risk/high-cost baselines. The goal is to enable cleanup to be accomplished safely, at less cost, and on faster schedules than currently envisioned.

This project is comprised of two projects: (a) groundwater monitoring and reporting and (b) legacy waste disposal. The groundwater monitoring is at two sites, the Sewage Lagoon Site and the Diesel Spill Site, pursuant to conditions imposed by the State. Monitoring is to continue until no contamination is observed above regulatory standards for four consecutive semiannual sampling events for the Lagoon Site and eight consecutive quarterly sampling events for the Diesel Site. Legacy low-level radioactive waste and hazardous waste, is being identified and disposed of as funding permits. Labs and facilities that are contaminated from DOE projects have been vacated and are in the process of being surveyed, decontaminated, and released for other research purposes. All legacy waste is expected to be disposed of by the end of FY 2005. Once legacy waste is disposed, remaining monitoring activities if any, may be turned over to the site landlord at the end of FY 2006.

PA-0011X NM Stabilization and Disposition-Depleted Uranium Hexafluoride Conversion

Includes costs to design, permit, build, and operate for five years one depleted uranium hexafluoride conversion facility, at the Paducah Gaseous Diffusion Plant site. The facility will convert depleted uranium hexafluoride into a more stable form, a depleted uranium oxide (U3 O8 ), suitable for reuse or disposition. The U3 O8 will be disposed of at Envirocare, the hydrogen fluoride by-products will be sold on the commercial market, and the empty cylinders will be crushed and sent to disposal or reuse.

PO-0101 Portsmouth Cold Standby

Includes costs to maintain the inactive gaseous diffusion plant equipment in cold standby so that operations can be restarted within eighteen to twenty-four months, if necessary. Activities include purging the cascade process equipment of uranium hexafluoride, buffering with dry air, maintaining the freon inventory, performs removal of uranium deposits from systems and equipment, and the heating of several buildings on the site to prevent damage from freezing in winter.

<b>Definition:</b>	Includes costs to manage the Highly Enriched Uranium Program, performs surveillance and maintenance on the former Uranium Program facilities, management of approximately 19,000 uranium hexafluoride cylinders, and manages legacy polychlorinated biphenyl contamination. The Highly Enriched Uranium Program activities will continue until a decision is made to place Highly Enriched Uranium process building X-326 into the decontamination and decommissioning program, currently estimated to be beyond 2010. The Highly Enriched Uranium Program stores, ships, treats, and disposes of filter and incinerator ashes; disposes of the remaining highly enriched uranium materials (i.e. oils, acids, and alumina) stored in X-326 L-Cage; provides interim storage of highly enriched uranium materials at the Nuclear Fuel Service facility; performs engineering design, special equipment procurement, construction, and safety/regulatory reviews of small-scale highly enriched uranium-uranium hexafluoride for the Oxide Conversion Facility at Nuclear Fuel Service facility; performs surveillance and maintenance on the 158 permanently shut down cells in X-326; and operates Enriched Uranium-DOE Materials Storage Area-12. Surveillance and maintenance of DOE leased and non-leased facilities, two cylinder yards, inventories of Special Nuclear Materials, and technical support to cold standby activities are performed.

Includes costs for activities required per the West Valley Demonstration Project Act of 1980 to decontaminate and decommission the facilities, tanks and hardware used in connection with the Project. Decommissioning criteria for the West Valley Demonstration Project was established by the Nuclear Regulatory Commission in January 2002. Decontamination and decommissioning operations will be performed to most effectively reduce worker, public and environmental risk at the Project. To support decontamination and decommissioning efforts, this program also involves those activities required to safely manage and maintain the site in compliance with federal and state statutes, as well as DOE orders and mandates.
